Application No. 10/757,700
Response to Office Action dated September 4, 2008

DEC 04 2008

Docket No.: 0630-1926P

AMENDMENTS TO THE CLAIMS

1-22. (Canceled).

23. (New) A method of communication between mobile terminals comprising:
establishing a communication link between a first mobile terminal and a second mobile terminal through Internet Protocol (IP) addressing in order to access open information stored in the second mobile terminal, the open information being allowed to be accessed from the second mobile terminal;

displaying, on a screen of the first mobile terminal, the open information accessed from the second mobile terminal to allow a user of the first mobile terminal to select at least one information item in the displayed open information; and

obtaining, from the second mobile terminal, the information item selected by the user of the first mobile terminal to be used in establishing a communication link between the first mobile terminal and a third mobile terminal via a mobile telecommunications network.

24. (New) The method of claim 23, wherein the first and second mobile terminals are connected with an IP network in a peer-to-peer manner.

25. (New) The method of claim 23, wherein for the establishing step, the first mobile terminal requests the second mobile terminal to connect with an IP network via the mobile telecommunication network if such connection is currently not established.

26. (New) The method of claim 23, wherein the information item comprises at least one phone number or other user information.

26. (New) The method of claim 23, wherein the establishing step comprising:
obtaining an IP address corresponding to a phone number of the second mobile terminal from a Web server; and

connecting the first mobile terminal with the second mobile terminal through the IP address of the second mobile terminal obtained from the Web server

27. (New) The method of claim 23, wherein the first and second mobile terminals are cell phones.

28. (New) The method of claim 23, wherein the mobile communication network is a CDMA(Code Division Multiple Access) network.

29. (New) A mobile terminal system comprising:

communication means configured to establish a connection between a first mobile terminal and a second mobile terminal via an Internet Protocol (IP) network to access open information stored in the second mobile terminal, the open information being allowed to be accessed from the second mobile terminal; and

a screen configured to display the open information accessed from the second mobile terminal to allow a user of the first mobile terminal to select at least one information item in the displayed open information,

wherein the communication means and the display cooperate to allow the user of the first mobile terminal to establish a connection with a mobile telecommunication network to contact a third mobile terminal using the selected information item, and

wherein the contact to the third mobile terminal can be performed without inquiring a user of the second mobile terminal.

30. (New) The mobile terminal system of claim 29, wherein the first and second mobile terminals are connected with an IP network in a peer-to-peer manner.

31. (New) The mobile terminal system of claim 29, wherein for the establishing of the connection between the first mobile terminal and the second mobile terminal, the first mobile

terminal requests the second mobile terminal to connect with the IP network via the mobile telecommunication network if such connection is currently not established.

32. (New) The mobile terminal system of claim 29, wherein the information item comprises at least one phone number or other user information.

33. (New) The mobile terminal system of claim 29, wherein, to establish the connection between the first mobile terminal and the second mobile terminal via the IP network, IP address corresponding to the phone number of the second mobile terminal from a Web server is obtained, and the first mobile terminal is connected with the second mobile terminal through the IP address of the second mobile terminal obtained from Web server

34. (New) The mobile terminal system of claim 29, wherein the first and second mobile terminals are cell phones.

35. (New) The mobile terminal system of claim 29, wherein the mobile communication network is a CDMA(Code Division Multiple Access) network.
